

Amendments to the Specification

Please replace the paragraph beginning on page 8, line 1 of the application as originally filed with the following amended paragraph:

A second embodiment of the method of operating the set of devices is outlined in the flowchart of Figure 4. This method differs from the method of Figure 3 only in the handling of the real-world description after it has been received by one of the devices in the set of devices. Therefore step 402 effectively replaces step 302 in this flowchart, all other steps including steps 400, 404, 406, 408, 410, 412, and 414 in the two flowcharts being are identical to steps 300, 304, 306, 308, 310, 312, and 314, respectively. In step 402 the description is read at a local server, which can be a dedicated device or could be contained within the capability of a device that nominally has a different purpose. The description is not distributed amongst the devices.
